

Story

Date	06 September 2026
Team ID	
Project Name	India's Agricultural crop production Analysis
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

- Observations: The line graph for agricultural yield between 1997 and 2021 shows frequent, sharp rises and falls rather than a steady line.
- Rice is planted on the largest amount of land (over 996 million units), followed by Wheat.
- Kerala leads all other states by a massive margin in total agricultural production.

- When looking at how production is measured, "Tonnes" takes up the largest section of the donut chart.
- Crops grown over the "Whole Year" make up the biggest piece of the seasonal production pie chart.
