

Dashboard Design

Date	06 September 2026
Team ID	
Project Name	India's Agricultural crop production Analysis
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- Clear and Intuitive Layout
- Use Appropriate Visualizations
- Colour and Theming
- Interactive Filters and Slicers
- Drill-Down Capabilities
- Responsive Design
- Custom Visuals and Icons
- Use of Infographics

1. Farming is growing over time: Between 1997 and 2021, India generally produced more crops and achieved better harvests.
2. Harvests go up and down: Even though things are improving overall, the amount of crops harvested jumps around a lot from year to year, likely due to unpredictable weather or changing rain patterns.
3. Certain seasons are much busier: Most of the country's crop production happens during the "Kharif" season or is spread across the "Whole Year," while other seasons produce much less.
4. Cotton takes up a lot of land: Compared to the other specific crops highlighted on the dashboard (like Gram or Groundnut), farmers are planting Cotton on a much larger amount of land.
5. A few states do the heavy lifting: Just a handful of states have the most farmland and grow the vast majority of the crops, making them the main agricultural centres for the country.

Activity 2

Publish Dashboard on Tableau Public and Paste the Dashboard Public link below:
